2019-2020 Collection Highlight

Main Materials & Functions

Materials

Dermizax® NX

Next-generation Waterproof Breathable Technology

Redefining breathability through molecular control technology Dermizax® Nx's top-rated breathability is achieved by precisely controlling the linkage of advanced hydrophilic PU molecules which then allows creating a smooth,well-balanced structure.Speedy transmission with minimal condensation Dermizax® Nx has the lowest condensation in the entire Dermizax® series.The more microclimate conditions saturate, the faster the transmission of water vapor,maiking Dermizax® Nx perfect for intense activity.

Environmentally conscious membrane

A new design polymer membrane consumes less energy during the membrane production process, reducing CO^2 emissions.

Dermizax® EV

The heavy-duty fabric that redefines comfort for performance fabrics. It is configured to provide maximum comfort by: an exceptionally high resistance to water pressure (that protects against the heaviest storm precipitation conditions) and greatly improved breathability. Entrant Dermizax-EV's comfortably dry feel quickly returns compared to other fabrics: Furthermore, the ultrathin membrane provides Entrant Dermizax-EV with a feather smooth texture and lightweight configuration with superior water resistance rating: 20,000mmH^2O and excellent breathability rating 20,000g/m^2/24hrs.

Phenix 20,000mm 10,000mm

A high performance fabric developed through extensive researches. Phenix 20,000mmH^2O and Phenix 10,000mmH^2O provides superior water-proofness, wind-proofness and breathability to keep us dry under the harshest conditions.

Aerothermo®

The weakness of regular fleece, which offers little resistance to wind and rain, have been relegated by the development of Aerothermo. This new-generation fleece not only effectively repels both, but also maintains the softness and warmth that makes it such an attractive material for winter garments. In addition to its light weight and high moisture permeability, it also provides sufficient elasticity allowing unrestricted activity. Phenix applies Aerothermo both as a middle layer to enhance the thermal insulation properties of our cold weather skiwear and itself as an outer layer for spring skiwear.

Down

Phenix select only excellent quality down to give our products the lightest weight, greatest warmth and longest performance. Warm, lightweight and resistant to expansion, shrinkage and water absorption in changing weather, down is the best thermal insulation material nature ever invented. Phenix down products exceed the industry's 80% down and feather mixture standard for high-quality down products, and their shaper tension of well over 600 padding guaranteed in accordance with international down and feather regulations.

Thunderon® Digenite Thermo

Digenite Thermo insulation contains Thunderon fiber for superior warmth and heat retention. Digenite Thermo insulation is a ceramic composite incorporating Copper Light (Sunlight and other Light) which Infrared Rays (Short and Long) which are invisible to the eye. By an exothermic heat generation from natural sunlight and body energies, generates heat and retains this heat. Digenite Thermo material absorbs these electric waves to generate heat. Furthermore, this Thunderon Digenite Thermo has strong anti-microbial and static electricity minimizing properties.

PrimaLoft®

PrimaLoft® insulation is an integral component in products that provide warmth and comfort from head to toe, and is warmer, drier, softer and more compressible than all other insulations.

Functions

4-way Stretch

Stretch for Maximum Mobility and Superior Silhouette

We introduce the 4-way Stretch fabric, which enhances higher mobility and flexibility for your better performance. This 4-way Stretch fabric allows us to provide you collections with superior silhouette and maximum mobility. We're sure that you would enjoy this new special garment on the slope.

2-way Stretch

Stretch for Mobility and Silhouette

It's essential to stay warm and dry when you're on the slopes, but you also want superior mobility. Phenix incorporates lightweight, pliant materials in its outerwear to make sure your skiwear doesn't limit your movement especially in key areas around the arms, waist and knees. The high-performance 2-way stretch material employed in our tops and bottoms ensure your max-ed out Mobility. These stretch materials also give Phenix Skiwear a better Silhouette with beautifully graceful lines and sculpting.

3-D Air Cutting

By analysis, we realize that the new 3-D cutting technique well matches the modern ski style. Generally, most of the pressure of wear goes to your shoulder where you start feeling tired as soon as you put on any heavy gear. Thanks to this new cutting technique, about 85% Clothing Pressure of the wear exerted to the shoulders can efficiently be reduced so as to make you feel the way the wear is floating in the air instead of putting on you. You may even forget you actually are wearing it.

Ergonomic Design

Carefully patterned by its R&D Center, Phenix's ergonomically designed ski wears give maximum freedom of movement.

Seamless Laser Cutting

Use of this state of the art technology, Phenix is able to offer a highly sophisticated and innovative precision cut. The laser cut results in a sealed edge free from any loose fibers. Delivering a high intensity focused laser spot produces a localized heat effectively welding predefined garment areas.

Adjustable Waist System

Fully adjustable waist for an exact fit. A snug fit ensures comfort and effortless motion. Gusseted waist band provides not only extra room for adjustment but also for comforts.

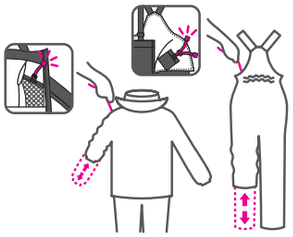
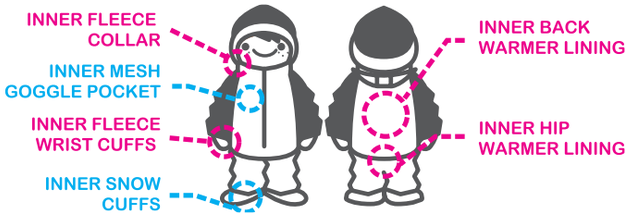
Skiwear Grows With Your Children

NO MORE BUYING EVERY SEASON

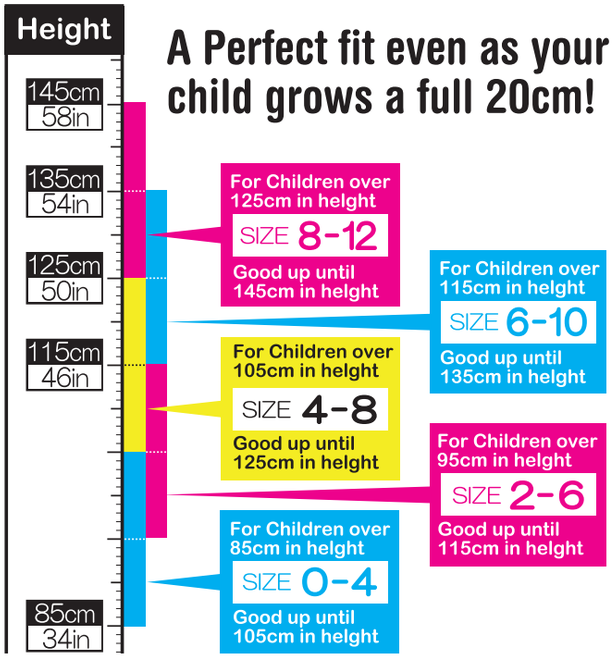
Adjust the drawcords stored in the pockets at both sides of jacket and pants lining accompanying the growth of children.





KIDS SKIWEAR HIGHLIGHTS

Phenix believe it's mostly important and have developed the best possible protection for the young children to have the maximum fun on the snow.



FUNCTIONALITIES

Phenix's mission is to create skiwears that react to movement and is comfortable under the harshest conditions. In order to carry out this mission, we devote all of our effort and technologies - even to where it is unnoticeable from the outside. For instance, 3-D Air Cutting is an essential technology for lightness without the jacket holding down a skier's shoulder. We proudly introduce features that make skiing almost stress free.
